Update instructions

For all updates coming from >= 7.10.2: we switched to automated database management - no manual database changes needed anymore.

Coming from older Versions: make sure to update your database with the shipped SQL scripts to 7.10.2 before starting your application server with the newest Version.

Liquibase

An improvement of the automatic database management (Liquibase) was implemented in case the server is abruptly stopped during database modification. For Oracle, there are extra steps necessary, please contact our support.

Table rows

The maximum number for displayed table rows has been limited to 50. All users with a higher setting will now see only 50 rows.

Installation Artefacts

Please remove all application artefacts from deployment folder and use only the new versions.

The current Release contains following artefacts:

-  Release Notes
-  TIM BPMN Engine (tim_v*.ear)
-  TIM Dashboard (dashboard_v*.war)
-  TIM encoder - standalone application to create encrypted credentials - (encoder.war)
-  SQL Update Scripts for current release (*.sql scripts)
